

1. Clear the Temporary Internet Files and close all the instances of Internet Explorer opened.
2. Open a fresh instance of Internet Explorer.
3. Press F12 key and F12 developer tools would appear on the screen.
4. Alternatively, we can also go to Settings> F12 Developer Tools to open F12 Developer Tools.
5. Once opened, go to the *Performance* tab.
6. On Internet Explorer, reach to the point from where we can start the steps to reproduce the issue.
7. Click on the Play button to start recording. Or we can also click on *Start profiling to begin a performance session* as well to start the recording
8. Reproduce the problem and click on the Stop button or click on *Stop profiling to generate a report*.
9. Once stopped, it should look something like this:

10. Save the log by clicking on the Save button.
11. The log should be saved with file extension *.diagsession*.
