

1. Download and install fiddler from <http://www.telerik.com/download/fiddler>
2. Close all the browser windows opened
3. Launch fiddler and go to Tools>Fiddler options, select the HTTPS tab and check *Decrypt HTTPS traffic*. You should now get some warnings related to the certificate installations, please click on OK and install the certificates.

4. Once this is done, please clear the Temporary Internet Files from the browser for which we are collecting the Fiddler trace.
5. Open a fresh browser window and access the application and once the issue is reproduced, note down the time so that we can narrow it down to that location.
6. Save the log file. File>save>All sessions.
