

1. Download and install Network Monitor, taking all the installation defaults:
<https://www.microsoft.com/en-in/download/details.aspx?id=4865>
2. Open command prompt and run the following command: *ipconfig /flushdns*
3. Start the Network Monitor tool, by default there should be a *Microsoft Network Monitor 3.4* icon on the desktop.
4. From the *Select Networks* pane, please click to select the network adapter we are using from the list (if it is not already checked).
5. Click the *New Capture* button available right below the File menu.

6. When you are ready to reproduce the problem, start the trace by clicking on the *Play* button in the toolbar, or by clicking *Capture > Start*.

7. Once the issue is captured, stop the network trace by clicking on the *Stop* button on the Network Monitor's window.
8. Save the trace by clicking on *File > Save As*, and save the file as *<name_of_the_file>.cap*.
