

1. Download Procdump utility from <https://docs.microsoft.com/en-us/sysinternals/downloads/procdump>
2. Create a folder under C drive and name it as Dumps
3. Extract ProcDump to C:\Dumps folder
4. Open command prompt as Administrator and cd to C:\Dumps
5. Run this command *procdump -ma -i c:\dumps*
6. Close command prompt and wait for the issue to happen
7. Once the issue happens, it would generate the dump files under C:\Dumps folder
8. As soon as you set this utility as default debugger using the command, there is no user or administrator intervention needed
9. After the dumps are collected, we should always uninstall procdump as the default debugger.
Run this command *procdump -u* to disengage the debugger.
